DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, 30-32 and 54, drawn to an apparatus for and method of use with a 3-D object and an optical scanner having scanning surface having a calibration feature, classified in class 250, subclass 559.3.
- II. Claims 25-29, 33-53 and 55-92, drawn to a method of and apparatus for measuring a feature of a wafer carrier using imaging, classified in class 414, subclass 935.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as separate and distinct inventions. Inventions in this relationship are distinct if it can be shown that the particulars of the individual inventions have separate utility. In the instant case, the particulars of invention I has separate utility as claimed because the calibration feature of mounting structure with respect to the scanner is not necessary for the program logic and imaging provided for a computer to monitor a wafer of invention II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
